

## METHOD FOR PLACEMENT OF A BALLOON DILATATION CATHETER ACROSS A STENOSIS AND APPARATUS THEREFOR

## ABSTRACT OF THE DISCLOSURE

over-the-wire balloon catheter radiopaque marker thereon at a known distance from a distal end of the catheter. An elongated flexible guide wire has a plurality of longitudinally spaced radiopaque markers on a distal portion thereof, with adjacent markers on the quide wire longitudinally spaced by a distance equal to the known distance between the distal end of the catheter and its radiopaque marker. The guide wire is advanced arterv until one of markers positioned desired location relative at 2 stenosis. Subsequently, the balloon catheter advanced over the quide wire until the radiopaque marker of the catheter is in a predetermined position relationship to the radiopaque marker of the guide wire which has aligned on the stenosis. The cooperating radiopaque markers of the guide wire and catheter thus allow the balloon member of the catheter to be positioned relative to the stenosis in fashion without the need to constantly inject fluoroscopic dye to view the stenosis.
